SKILLS

TESTING TYPES

- Functional testing
- Regression testing
- Smoke / Exploratory
- Pre-release & Hotfix
- Release validation

GAME QA / LIVEOPS

- Events, battle pass, stores
- Balance and game data
- Localization and UI content
- Feature documentation review
- Bug reporting & defect tracking

TOOLS AND PLATFORMS

- Jira, Confluence, Google Docs
- Git
- NOX / Android Studio
- Python
- SQL
- Android, iOS, Web, Windows

ADDITIONAL

- AI-assisted QA tooling
- Unity: experience through personal projects and a game jam. Worked with Hierarchy, Inspector, Assets, UI components, Prefab system, animation and VFX

LANGUAGES

Russian

Native

English — B1

Reading documentation, basic written and spoken communication

PROFILE

QA Engineer with **5+ years** of continuous experience in manual testing of live-service game projects. Worked on **Vikings: War of Clans** and **Throne: Kingdom at War** across Android, iOS, Web and Windows. Focus areas: functional and regression testing, LiveOps tasks, balance, localization, release validation and hotfix checks. Initiated the creation of an internal Python-based tool for automating game data checks.

WORK EXPERIENCE

GAMETEQ

Sep 2022 — Present

QA Engineer · Tbilisi, Georgia / Remote

Projects: Vikings: War of Clans, Throne: Kingdom at War (Android, iOS, Web, Windows)
Continued working on the same projects after the team moved from Plarium. Continuous experience since March 2021.

- Test LiveOps tasks across all platforms: new features, regression, pre-release builds, hotfix changes and release validation
- Verify game content: events, seasonal store, Asgard store, battle pass, competitions, bank offers, monsters and rewards
- Validate implementation against Jira tasks, documentation, mockups, balance sheets, Excel/Google Sheets and game logs; identify discrepancies before release
- Review documentation for new features: identify ambiguities, inconsistencies and negative scenarios before testing starts
- Test localization, UI texts, news, FAQ/portal texts, visual elements and VFX
- Work with data-heavy tasks: verify large volumes of rewards, prices, limits and points across Excel/Google Sheets, Jira, logs and the game client
- Actively collaborate with developers and game designers to clarify requirements and resolve task-related questions
- Create and maintain checklists to ensure complete test coverage
- Manage the full defect lifecycle; verify fixes on required platforms and builds

INITIATIVES

- ♦ Initiated and developed an internal AI-assisted tool for automating routine game data checks. Result: reduced check time by 70% (from several hours to 15–20 minutes) and minimized the risk of human error.
- ♦ Prepared internal QA documentation: practical guidelines, working materials for the QA team and a description of cross-team interactions.
- ♦ Proposed debug panel improvements: reduced user-switching from 5 steps to 2 and initiated new cheat commands for faster test environment setup — implemented by devs, adopted across the QA team.

Plarium

Mar 2021 — Aug 2022

Quality Engineer · Krasnodar, Russia

Projects: Vikings: War of Clans, Throne: Kingdom at War (Android, iOS, Web, Windows)

- Performed manual testing of live-ops tasks: new features, UI/UX, balance, localization, visual elements and VFX
- Validated implementation against Jira tasks, documentation, mockups, Excel/Google Sheets and game logs
- Took part in regression testing, pre-release checks, release validation and hotfix checks
- Managed the full defect lifecycle; verified fixes on required platforms and builds
- Took part in feature documentation review: identified ambiguities and negative scenarios before testing started

EDUCATION

Kuban State University

Specialist degree — Fundamental Mathematics and Mechanics
2012 — 2017
